Scope of Work

Project: E-commerce Platform for Electronic Gadgets

Prepared by: Somya Agarwal

Date: 23-09-2025

In-Scope Activities

- Development of user registration and authentication system.
- Product catalog with browsing, filtering, and search features.
- Detailed product pages including specifications, pricing, and availability.
- Shopping cart and checkout functionality with multiple payment options.
- Order management with confirmations, tracking, and cancellation options.
- User account management including profile updates, address management, and order history.
- Compatibility across web and mobile devices.

Out-of-Scope Activities

- Integration with third-party marketplaces such as Amazon or Flipkart.
- Advanced technologies such as AR/VR-based product previews.
- Loyalty programs, subscriptions, or membership models (may be considered in later phases).
- Multi-language or multi-currency support in the initial release.

Deliverables

The project will produce the following deliverables:

- Business Requirement Document (BRD)
- Functional Requirement Document (FRD)
- Use Case Diagrams
- UML Class Diagram
- Scope of Work Document
- Fully functional e-commerce platform for electronic gadgets

Milestones and Timeline

The estimated project duration is **six months**, divided into the following phases:

1. Requirement Analysis – 2 weeks
2. Design Phase (UI/UX and Architecture) – 4 weeks
3. Development Phase – 12 weeks
4. Testing & Quality Assurance – 4 weeks
5. Deployment and Handover – 2 weeks

Assumptions

- The client will provide accurate and updated product data (images, specifications, and pricing).
- Necessary third-party APIs such as payment gateways will be accessible and reliable.
- The development team will have access to required tools and technologies.
- End users will have internet access to use the platform.

Constraints

- The project must be completed within the six-month timeline.
- Budget is fixed for the initial release phase.
- The system must comply with security standards such as SSL encryption and PCI DSS compliance for online payments.
- The platform must be compatible with modern browsers and mobile devices.

Success Criteria

The project will be considered successful if:

- Customers can register, search, purchase, and manage orders without technical issues.
- Transactions are secure and reliable across all supported payment methods.
- The platform demonstrates stable performance during peak usage.
- Customer satisfaction is reflected through positive feedback and repeat usage.
